GS Small/Mid Cap Growth Fund	-1.36	12.72	9.37	9.80	0.93	1.05	6/3/2005
GS Technology Opportunities Fund	4.78	14.80	9.84	5.35	1.07	1.14	10/1/1999

The returns represent past performance. Past performance does not guarantee future results. The Fund's investment return and principal value will fluctuate so that an investor's shares, when redeemed, may be worth more or less than their original cost. Current performance may be lower or higher than the performance quoted above. Please visit our Web site at: www.GSAMFUNDS.com to obtain the most recent month-end returns.

Performance reflects cumulative total returns for periods of less than one year and average annual total returns for periods of greater than one year. Since inception returns for periods of less than one year are cumulative. All Fund performance data reflect the reinvestment of distributions.

The expense ratios of the Fund, both current (net of any fee waivers or expense limitations) and before waivers (gross of any fee waivers or expense limitations) are as set forth above. Pursuant to a contractual arrangement, the Fund's waivers and/or expense limitations will remain in place through at least 12/29/2016, and prior to such date the investment adviser may not terminate the arrangements without the approval of the Fund's Board of Trustees.

Standardized Total Returns are average annual total returns or cumulative total returns (only if the performance period is one year or less) as of the most recent calendar quarter-end. They assume reinvestment of all distributions at net asset value. Because Institutional Shares do not involve a sales charge, such a charge is not applied to their Standardized Total Returns.

The Goldman Sachs Strategic Growth Fund invests primarily in U.S. equity investments. The Fund's equity investments are subject to **market risk**, which means that the value of the securities in which it invests may go up or down in response to the prospects of individual companies, particular sectors and/or general economic conditions. **Different investment styles** (e.g., "growth") tend to shift in and out of favor, and at times the Fund may underperform other funds that invest in similar asset classes.

The Goldman Sachs Concentrated Growth Fund invests primarily in U.S. equity investments and invests, under normal circumstances, in approximately 30-45 companies. The Fund's equity investments are subject to **market risk**, which means that the value of the securities in which it invests may go up or down in response to the prospects of individual companies, particular sectors and/or general economic conditions. The securities of **mid- and small-capitalization companies** involve greater risks than those associated with larger, more established companies and may be subject to more abrupt or erratic price movements. **Different investment styles** (e.g., "growth") tend to shift in and out of favor, and at times the Fund may underperform other funds that invest in similar asset classes. The Fund is "**non-diversified**" and may invest more of its assets in fewer issuers than "diversified" funds. Accordingly, the Fund may be more susceptible to adverse developments affecting any single issuer held in its portfolio and to greater losses resulting from these developments.

The Goldman Sachs Growth Opportunities Fund invests primarily in U.S. equity investments with a primary focus on mid-capitalization companies. The Fund's equity investments are subject to **market risk**, which means that the value of the securities in which it invests may go up or down in response to the prospects of individual companies, particular sectors and/or general economic conditions. The securities of **mid- and small-capitalization companies** involve greater risks than those associated with larger, more established companies and may be subject to more abrupt or erratic price movements. **Different investment styles** (e.g., "growth") tend to shift in and out of favor, and at times the Fund may underperform other funds that invest in similar asset classes.

The Goldman Sachs Small/Mid Cap Growth Fund invests primarily in equity investments with a primary focus on mid- and small-capitalization companies. The Fund's equity investments are subject to **market risk**, which means that the value of the securities in which it invests may go up or down in response to the prospects of individual companies, particular sectors and/or general economic conditions. The securities of **mid- and small-capitalization companies** involve greater risks than those associated with larger, more established companies and may be subject to more abrupt or erratic price movements. **Different investment styles** (e.g., "growth") tend to shift in and out of favor, and at times the Fund may underperform other funds that invest in similar asset classes.

The Goldman Sachs Technology Opportunities Fund invests primarily in equity securities of high quality technology, media or service companies that adopt or use technology to improve their cost structure, revenue opportunities or competitive advantage ("Technology Tollkeeper" companies). Because the Fund **concentrates its investments** in certain specific industries, the Fund is subject to greater risk of loss as a result of adverse economic, business or other developments affecting those industries than if its investments were more diversified across different industries. **Stock prices of internet and internet-related companies** in particular may be especially volatile. The securities of **mid- and small-capitalization companies** involve greater risks than those associated with larger, more established companies and may be subject to more abrupt or erratic price movements. **Different investment styles** (e.g., "growth") tend to shift in and out of favor, and at times the Fund may underperform other funds that invest in similar asset classes.

General Disclosures

**Asset
Management**

Although certain information has been obtained from sources believed to be reliable, we do not guarantee its accuracy, completeness or fairness. We have relied upon and assumed without independent verification, the accuracy and completeness of all information available from public sources.

The portfolio risk management process includes an effort to monitor and manage risk, but should not be confused with and does not imply low risk.

Fund holdings and allocations shown are unaudited, and may not be representative of current or future investments. Fund holdings and allocations may not include the Fund's entire investment portfolio, which may change at any time. Fund holdings should not be relied on in making investment decisions and should not be construed as research or investment advice regarding particular securities. Current and future holdings are subject to risk.

Indices are unmanaged. The figures for the index reflect the reinvestment of dividends but do not reflect the deduction of any fees or expenses which would reduce returns. Investors cannot invest directly in indices.

Weighted Average (Wtd. Avg.) Market Capitalization represents the average value of the companies in the index or portfolio. Companies with a larger market capitalization have a greater impact on the calculation. Weighted (Wtd.) Median Market Capitalization provides the middle market capitalization level in the index or portfolio. Companies with a larger market capitalization have a greater impact on the calculation. Price/Book Value is the current share price of a stock divided by its book value per share, which is the value of the shareholder's equity on the corporation's balance sheet. Return on assets (ROA) is the amount, expressed as a percentage, earned on a company's assets for a given period. It is calculated by dividing assets at the beginning of the accounting period into net income for the period. EPS Growth (Trailing 5 years) refers to the growth rate of a company's earnings, annualized over the preceding 5 year period. Price to Sales, is a ratio for valuing a stock relative to its own past performance, other companies or the market itself. Price to sales is calculated by dividing a stock's current price by its revenue per share for the trailing 12 months. The price-to-earnings ratio is the price of a stock divided by its earnings per share. The P/E ratio may either use the reported earnings from the latest yield (called a trailing P/E ratio) or employ an analyst's forecast of next year's earnings (called a forward P/E ratio). The price to earnings ratio, also known as the multiple, gives investors an idea of how much they are paying for a company's earning power. Return on equity is the amount, expressed as a percentage, earned on a company's common stock investment for a given period. It is calculated by dividing common stock equity (net worth) at the beginning of the accounting period into net income for the period after preferred stock dividends but before common stock dividends. Return on equity tells common shareholders how effectively their money is being employed.

Goldman, Sachs & Co., distributor of the Fund(s), is not a bank, and Fund shares distributed by Goldman, Sachs & Co. are neither deposits nor obligations of, nor endorsed, nor guaranteed by any bank or other insured depository institution, nor are they insured by the Federal Deposit Insurance Corporation, the Federal Reserve Board, or any other government agency. Investment in the Funds involves risks, including possible loss of the principal amount invested.
