

AN ACTIVE AND FLEXIBLE APPROACH TO MUNICIPAL INVESTING

Ownership of high-quality municipal bonds alongside an opportunistic pooled vehicle may offer customization, diversification and tax-efficiency.

Tax-Free Income

Aims to maximize individual efficiency via state level consideration and ongoing tax management of securities

Active, Flexible Approach

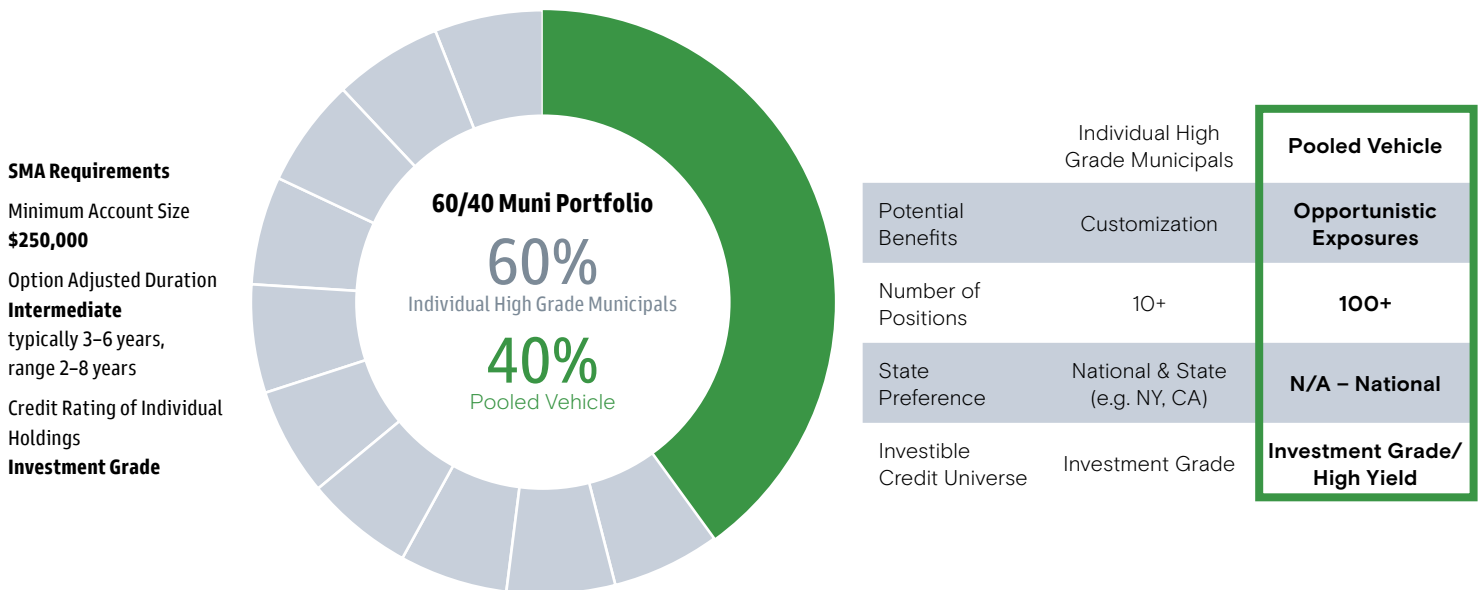

In a changing market environment with increased interest rate volatility, investors may benefit from a flexible approach that seeks opportunities across the entire municipal bond market

Experienced Management

Access to a tenured portfolio management team with flexibility to navigate complexities of the municipal market

A Dynamic Approach to Portfolio Construction

Our differentiated Separately Managed Account (SMA) structure provides exposure to both individual bonds and a diversified pooled vehicle. Seeks to capitalize on credit opportunities, changes in interest rates and market dislocations.

Source: Goldman Sachs Asset Management. As of June 30, 2021. Years of industry experience as of January 31, 2020. For illustrative purposes only. Goldman Sachs does not provide accounting, tax or legal advice. Please see additional disclosures at the end of this presentation. Typical credit rating refers to the underlying securities held in the portfolio. Targets are subject to change and are current as of the date of this presentation. Targets are objectives and do not provide any assurance as to future results. Sample guidelines are for informational purposes only and offered solely as a reference. It does not refer to any actual investments. This material is not intended to be used as a general guide to investing, or as a source of any specific investment recommendations, and makes no implied or express recommendations concerning the manner in which any client's account should or would be handled. Diversification does not protect an investor from market risk and does not ensure a profit. There is no guarantee that objectives will be met.

3. SP-1+ An issue determined to possess a very strong capacity to pay debt service.

4. SP-1 Strong capacity to pay principal and interest. **5. Not Rated (NR)** includes holdings of securities not rated by any major rating agency. Unrated securities held in the fund may be of higher, lower, or comparable credit quality to securities that have a credit rating from a Nationally Recognized Statistical Rating Organization (NRSRO). Therefore, investors should not assume that the unrated securities in the fund increase or decrease the fund's overall credit quality. **6. Cash** may include local currency, foreign currency, short-term investment funds, bank acceptances, commercial paper, margin, repurchase agreements, time deposits, variable-rate demand notes, and/or money market mutual funds. The Cash category may show a negative market value percentage as a result of a) the timing of trade date versus settlement date transactions and/or b) the portfolio's derivative investments, which are collateralized by the portfolio's available cash and securities. Such securities are AAA rated by an independent rating agency, have durations between -2 and 1 years, and are limited to the following sectors: governments, agencies, supranationals, corporates, and agency-backed adjustable-rate mortgages. These securities are not reclassified under the Cash category; rather, they remain classified under their proper descriptions (e.g., rating, sector, etc.). **7. Internal Rating Allocations of Non-Rated Securities** include holdings of securities not rated by any major rating agency. Unrated securities held in the fund are internally rated by the municipal credit research team under Goldman Sachs Asset Management (GSAM). The municipal credit research team utilizes rating standards and rating scales similar to those used by Fitch, S&P and Moody's to assess the credit quality of holdings of securities not rated by any major rating agency. GSAM converts all internal ratings to the equivalent S&P major rating category when illustrating credit rating breakdowns. Please see the GIPS Report included in the materials.

The returns are gross and do not reflect the deduction of investment advisory fees, which will reduce returns. Our investment advisory fees are described in Part 2 of our Form ADV. See additional disclosures.

The model portfolio provided herein has certain limitations. These results are based on simulated or hypothetical performance results that have certain inherent limitations. Unlike the results shown in an actual performance record, these results do not represent actual trading. Also, because these trades have not actually been executed, these results may have under- or over-compensated for the impact, if any, of certain market factors, such as lack of liquidity. Simulated or hypothetical trading programs in general are also subject to the fact that they are designed with the benefit of hindsight. No representation is being made that any account will or is likely to achieve profits or losses similar to these being shown.

This model is shown for illustrative purposes only and is representative of the Dynamic Municipal Income SMA Strategy. It does not purport to show the holdings or sector weightings of an actual account. This information is shown for illustrative purposes only and does not constitute a recommendation of exposures for any client account. The exposures for the model portfolio will differ from the exposures for a client account because of specific client guidelines, objectives and restrictions.

Portfolios and benchmarks are not rated by an independent ratings agency. GSAM may receive credit quality ratings on the underlying securities of portfolios and their respective benchmarks from the three major rating agencies: Standard & Poor's, Moody's and Fitch. GSAM calculates the credit quality breakdown and overall rating for both portfolios and their respective benchmarks according to the client's preferred method or such other method as selected by GSAM in its sole discretion. The applicable method may differ from the method independently used by benchmark providers. Securities that are not rated by all three agencies are reflected as such in the breakdown. For illustrative purposes, GSAM converts all ratings to the equivalent S&P major rating category when reporting the credit rating breakdown. Ratings and portfolio credit quality may change over time. Unrated securities do not necessarily indicate low quality, and for such securities the investment adviser will evaluate the credit quality.

Past performance does not guarantee future results, which may vary.

Portfolio holdings and/or allocations shown above are as of the date indicated and may not be representative of future investments. The holdings and/or allocations shown may not represent all of the portfolio's investments. Future investments may or may not be profitable.

US Investment Grade Plus Intermediate Duration Municipal (High Allocation)

Benchmark: Bloomberg Barclays Municipal Bond 1-10 Year Blend Index

1. Composite inception date: 03/01/2020. Returns for periods of less than one year cannot be annualized. Where applicable, annual performance for up to 10 years is presented. Additional performance information is available upon request. Currency used to express Composite and Total Firm Assets, and composite and benchmark performance: USD.
2. The composite net of fee returns are calculated by adjusting each monthly gross of fee composite return by the highest model fee applicable to any prospective investor type, including institutional, private wealth, and wrap prospective investors. Actual fees and expenses may differ from those reflected in this composite presentation which would cause performance to differ. Where performance fees exist, the calculation was based on assumptions as to how the rate was applied which could differ from how it was actually charged. The model fee includes all charges, transaction costs, investment management fees, custody fees, and other administrative fees.
3. Dispersion represents an asset weighted standard deviation of annual portfolio returns. Dispersion is not considered meaningful where less than five portfolios have been in the composite for the entire year and therefore has not been presented in years where an N/A appears.
4. Total Firm Assets are presented on an annual basis. For periods ending prior to June 30, 2021, Total Firm Assets represent Composite Assets as a percentage of Total Firm Assets. For periods ending on or after June 30, 2021, Total Firm Assets are presented in millions.
5. Benchmark Source: Bloomberg Barclays. The Bloomberg Barclays Municipal Bond 1-10 Year Index is the 1-10 Year Blend (1-12) component of the Municipal Bond index. This is a rules-based, market-value-weighted index engineered for the long-term tax-exempt bond market. The bonds included must be rated investment-grade (Baa3/BBB- or higher) by at least two of the following ratings agencies: Moody's, S&P, Fitch. If only two of the three agencies rate the security, the lower rating is used to determine index eligibility. If only one of the three agencies rates a security, the rating must be investment-grade. They must have an outstanding par value of at least \$7 million and be issued as part of a transaction of at least \$75 million. The bonds must be fixed rate, have a dated-date after December 31, 1990, and must be at least one year from their maturity date. Remarketed issues, taxable municipal bonds, bonds with floating rates, and derivatives, are excluded from the benchmark. The index has four main sectors: general obligation bonds, revenue bonds, insured bonds (including all insured bonds with a Aaa/AAA rating), and prerefunded bonds. This index is Total Return, Unhedged and expressed in USD. Effective November 3, 2008, all Lehman Brothers indices have been rebranded to Barclays Capital indices. Effective March 19, 2012, all Barclays Capital indices have been rebranded to Barclays indices. Effective August 24, 2016, all Barclays indices have been rebranded to Bloomberg Barclays indices.
6. For annual and YTD periods, the three year annualized ex-post standard deviation using monthly gross-of-fee returns is presented as of the date shown. For each period for which an annualized return is presented, the corresponding annualized ex-post standard deviation of the composite and benchmark is also provided. N/A is presented for periods where the composite does not have 36 consecutive monthly returns as of the date shown or for the full time period presented as standard deviation is not considered meaningful in these cases.

GSAM claims compliance with the Global Investment Performance Standards (GIPS®) and has prepared and presented this report in compliance with the GIPS standards. GSAM has been independently verified for the periods July 1, 2000 through June 30, 2006 by Deloitte & Touche, LLP and for the periods July 1, 2006 through December 31, 2018 by Ernst & Young LLP. The verification report(s) is/are available upon request.

A firm that claims compliance with the GIPS standards must establish policies and procedures for complying with all the applicable requirements of the GIPS standards. Verification provides assurance on whether the firm's policies and procedures related to composite and pooled fund maintenance, as well as the calculation, presentation, and distribution of performance, have been designed in compliance with the GIPS standards and have been implemented on a firm-wide basis. Verification does not provide assurance on the accuracy of any specific performance report.

Goldman Sachs Asset Management (excluding the following business units (i) Alternative Investments and Manager Selection (AIMS) and (ii) Real Estate Investment

Department) is referred to herein as the "Firm" or "GSAM." Established in 1988, GSAM provides investment and advisory services globally to both institutional and individual clients and is defined as the "Firm" for the purposes of complying with the Global Investment Performance Standards (GIPS®). In April 2019, GSAM acquired Rocatton Investment Advisors LLC. In December 2019, the Firm was redefined to exclude AIMS Long-Only Strategies and Real Estate Investment Department.

The US Investment Grade Plus Intermediate Duration Municipal (High Allocation) composite consists of portfolios that invest in a spectrum of investment grade municipal securities which are structured as a ladder, generally allocating evenly across maturities, and target a 40% allocation to harder-to-source, higher-yielding municipal securities. Portfolios may invest in investment grade and sub-investment grade securities. Portfolios are actively managed to exceed the performance of an appropriate index, such as the Bloomberg Barclays Municipal Bond 1-10 Year Blend Index. Portfolios are included in the composite with no restrictions on asset size. Portfolios may include institutional accounts, pooled vehicles or private wealth accounts.

These total return figures represent past performance and are not indicative of future returns which may vary. Performance results are calculated utilizing a time-weighted rate of return methodology and include the reinvestment of earnings. Effective April 2010, institutional and private wealth account returns are calculated by applying the true time-weighted return calculation methodology. Previously account returns were calculated applying the Modified BAI calculation methodology based on a monthly valuation and daily weighted cash flows. Accounts are valued pursuant to GSAM's Valuation Procedures and reflect GSAM's good faith estimate of fair market levels for all positions, which may not be realized upon liquidation. The circumstances of the transaction and transaction size will affect the price received upon liquidation.

GSAM's valuation policies are available upon request. Gross performance results are presented before management and custodial fees but after all trading commissions and transaction costs. Net performance results are net of all charges, transaction costs, investment management fees, custody fees, and other administrative fees. Where composites include mutual fund portfolios, the mutual fund performance is calculated gross of management and other fund fees for all share classes. Gross mutual fund performance is derived from net fund performance, applying the funds' total expense ratio. All relevant funds' share class assets are reflected in the composite and total GSAM assets figures. Each share class is treated as one account.

Account and mutual fund valuation sources and timing may sometimes differ causing dispersion within the composite. The composite may include portfolios of different base currencies which have been redenominated to a common currency using monthly exchange rates obtained from WM Reuters and Financial Times (FT). Composite monthly returns are the size-weighted averages of the portfolios' monthly returns. Composite monthly returns are geometrically linked to calculate composite annual returns. GSAM's policies for calculating performance and preparing compliant presentations are available upon request. Segments of multiple asset class portfolios which have been managed as stand alone portfolios with separately managed cash may be included in the composite. A list of composite descriptions, pooled fund descriptions for limited distribution pooled funds, and broad distribution pooled funds is available upon request.

While the Adviser seeks to design a portfolio which will reflect appropriate risk and return features such as sector weights, credit quality and duration, the Client understands that such characteristics of the portfolio, as well as its volatility, may deviate to varying degrees from those of the benchmark.

The maximum fee schedule applied for this product for any prospective investor type, including institutional, private wealth, and wrap accounts, reflects 300 bps.

Effective January 1, 2012, GSAM changed its methodology for applying model fees changes for calculation of composite net returns on a prospective basis. When a fee increase occurs mid month, the highest applicable fee rate is applied effective the 1st of that month. When a fee decrease occurs mid month, the lowered fee rate is applied effective the 1st of the following month. Between July 1, 2005 and December 31, 2011, the methodology reflected the application of the highest model fee based on the applicable fee schedule in effect for that calendar year. Prior to July 1, 2005, the current highest fee in the Form ADV, Part II was applied retroactively across all periods. As a result, net returns presented through June 30, 2005 reflect the fees in effect on June 30, 2005.

For the performance period presented, investment professionals may have changed or departed, none of which in the Firm's view have altered the composite's strategy.

Wrap fee portfolio assets represented 0% of the composite's assets for calendar years 2020 through Present.

Derivative instruments are used in the management of this strategy, both for risk management purposes and for the efficient implementation of investment decisions. Exchange traded futures, FX forwards, swaps and options are all permitted derivative instruments. While borrowing is generally not permitted within this strategy, portfolios within this composite may experience economic leverage through the use of derivatives.

Composite inception date: 03/01/2020

Glossary

Credit Quality Rating assesses the financial ability of a debt issuer to make timely payments of principal and interest. Ratings of AAA (the highest), AA, A, and BBB are investment-grade quality. Ratings of BB, B, CCC, CC, C and D (the lowest) are considered below investment grade, speculative grade, or junk bonds.

Option-Adjusted Duration (OAD) is the modified duration of a bond after adjusting for any embedded optionality. The Option Adjusted measure of duration takes into account the fact that yield changes may change the expected cash flows of the bond because of the presence of an embedded option, such as a call or put.

Volatility is a measure for variation of price of a financial instrument over time.

Risk Considerations

GS Dynamic Municipal SMA Risk Considerations: Investments in fixed-income securities are subject to credit and interest rate risks. Bond prices fluctuate inversely to changes in interest rates. Therefore, a general rise in interest rates can result in the decline in the bond's price. Credit risk is the risk that an issuer will default on payments of interest and principal. This risk is higher when investing in high yield bonds, also known as junk bonds, which have lower ratings and are subject to greater volatility. All fixed income investments may be worth less than their original cost upon redemption or maturity.

Income from municipal securities is generally free from federal taxes and state taxes for residents of the issuing state. While the interest income is tax-free, capital gains, if any, will be subject to taxes. Income for some investors may be subject to the federal Alternative Minimum Tax (AMT).

General Disclosures

THIS MATERIAL DOES NOT CONSTITUTE AN OFFER OR SOLICITATION IN ANY JURISDICTION WHERE OR TO ANY PERSON TO WHOM IT WOULD BE UNAUTHORIZED OR UNLAWFUL TO DO SO.

Prospective investors should inform themselves as to any applicable legal requirements and taxation and exchange control regulations in the countries of their citizenship, residence or domicile which might be relevant.

This material is provided for informational purposes only and should not be construed as investment advice or an offer or solicitation to buy or sell securities. This material is not intended to be used as a general guide to investing, or as a source of any specific investment recommendations, and makes no implied or express recommendations concerning the manner in which any client's account should or would be handled, as appropriate investment strategies depend upon the client's investment objectives.

Firmwide AUM includes assets managed by GSAM and its investment advisory affiliates.

Views and opinions expressed are for informational purposes only and do not constitute a recommendation by GSAM to buy, sell, or hold any security. Views and opinions are current as of the date of this presentation and may be subject to change, they should not be construed as investment advice.

Goldman Sachs does not provide legal, tax or accounting advice, unless explicitly agreed between you and Goldman Sachs (generally through certain services offered only to clients of Private Wealth Management). Any statement contained in this presentation concerning U.S. tax matters is not intended or written to be used and cannot be used for the purpose of avoiding penalties imposed on the relevant taxpayer. Notwithstanding anything in this document to the contrary, and except as required to enable compliance with applicable securities law, you may disclose to any person the US federal and state income tax treatment and tax structure of the transaction and all materials of any kind (including tax opinions and other tax analyses) that are provided to you relating to such tax treatment and tax structure, without Goldman Sachs imposing any limitation of any kind. Investors should be aware that a determination of the tax consequences to them should take into account their specific circumstances and that the tax law is subject to change in the future or retroactively and investors are

strongly urged to consult with their own tax advisor regarding any potential strategy, investment or transaction.

This information discusses general market activity, industry or sector trends, or other broad-based economic, market or political conditions and should not be construed as research or investment advice. This material has been prepared by GSAM and is not financial research nor a product of Goldman Sachs Global Investment Research (GIR). It was not prepared in compliance with applicable provisions of law designed to promote the independence of financial analysis and is not subject to a prohibition on trading following the distribution of financial research. The views and opinions expressed may differ from those of Goldman Sachs Global Investment Research or other departments or divisions of Goldman Sachs and its affiliates. Investors are urged to consult with their financial advisors before buying or selling any securities. This information may not be current and GSAM has no obligation to provide any updates or changes.

Effect of Fees

The following table provides a simplified example of the effect of management fees on portfolio returns. Assume a portfolio has a steady investment return, gross of fees, of 0.5% per month and total management fees of 0.05% per month of the market value of the portfolio on the last day of the month. Management fees are deducted from the market value of the portfolio on that day. There are no cash flows during the period. The table shows that, assuming all other factors remain constant, the difference increases due to the compounding effect over time. Of course, the magnitude of the difference between gross-of-fee and net-of-fee returns will depend on a variety of factors, and this example is purposely simplified.

Period	Gross Return	Net Return	Differential
1 year	6.17%	5.54%	0.63%
2 years	12.72%	11.38%	1.34%
10 years	81.94%	71.39%	10.55%

References to indices, benchmarks or other measures of relative market performance over a specified period of time are provided for your information only and do not imply that the portfolio will achieve similar results. The index composition may not reflect the manner in which a portfolio is constructed. While an adviser seeks to design a portfolio which reflects appropriate risk and return features, portfolio characteristics may deviate from those of the benchmark.

Index Benchmarks

Indices are unmanaged. The figures for the index reflect the reinvestment of all income or dividends, as applicable, but do not reflect the deduction of any fees or expenses which would reduce returns. Investors cannot invest directly in indices.

The indices referenced herein have been selected because they are well known, easily recognized by investors, and reflect those indices that the Investment Manager believes, in part based on industry practice, provide a suitable benchmark against which to evaluate the investment or broader market described herein. The exclusion of "failed" or closed hedge funds may mean that each index overstates the performance of hedge funds generally."
